Application/Control Number: 10/664,286

Art Unit: 1754

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Claims 1-11, drawn to a WGS process, classified in class 423, subclass
 656.

II. Claims 12 and 13, drawn to a catalyst and WGS process, classified in class 423, subclass 656.

The inventions are independent or distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different effects, i.e., the effect of the particular catalyst recited in claims 12 and 13 versus the effect of the particular process steps recited in claim 1. Claim 11 is separate and distinct from claims 12 and 13 since claim 1 is evidence that claim 11 does not depend upon the details of claims 12 and 13 for patentability.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Keller on July 27, 2006 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-11. Affirmation of this election must be made by applicant in replying to this Office action. Claims 12 and 13 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Application/Control Number: 10/664,286

Art Unit: 1754

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kristiansen in view of Silver. Kristiansen discloses a method for carrying out the WGS reaction in the presence of a copper-based catalyst. (See the Abstract.) The difference between the process disclosed by Kristiansen, and that recited in applicants' claims, is that Kristiansen does not disclose steps (b) through (e) as recited in claims 1. Silver discloses in the paragragh bridging columns 1 and 2 that reactors using the catalyst of Kristiansen must be purged with a flow of hydrogen to initially reduce it, and steps must be taken subsequent to operation to prevent significant oxidation or exposure to oxygen with a special shutdown purge and the maintenance of an inert atmosphere during shutdown. (See also col. 2, lines 42-56.) It would be obvious from Silver to modify the process of Kristiansen with steps (b) through (e) as recited in applicants' claim 1, since Silver teaches at col. 2, lines 7-13 and 52-56 that the catalyst of Kristiansen must be

Application/Control Number: 10/664,286

Art Unit: 1754

subjected to a special shutdown purge in the presence of an inert atmosphere.. It would be further obvious to provide a "substantially dry" atmosphere during the purge step, since one of ordinary skill in the art would appreciate that the presence of water or steam in the atmosphere would no longer render the atmosphere "inert".

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The recitation of "at least one of..." is improper Markush terminology.

The other references are made of record for disclosing various WGS processes.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wayne Langel whose telephone number is 571-272-1353. The examiner can normally be reached on Monday through Friday, 8 am - 3:30 pm Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
